## Overview

---

The purpose of this bulletin is to announce End-of-Life (EOL) for the following functionality:

**SAML Service Providers functionality.** This notification is relevant to customers of SAS Cloud who were using SAS Cloud SAML Service.

As part of our ongoing investment in improving the user experience we are announcing End of Life for the **SAML Service Providers functionality**, which is being replaced by a new template based federation module.

## Affected Customers

---

This EOL announcement is relevant for customers who have federated applications using **SAML Service Providers**, configured in the COMMS section of the SAS Cloud Token Management Console, now known as SafeNet Trusted Access Token Management Console.

## Replacement Service

---

The SAML Service Providers functionality has been replaced by a template-based federation module that is already available to all SafeNet Trusted Access Basic (formerly SAS Cloud) customers.

The new template-based federation offers the following benefits for our customers:

- Easy-to-use template-based federation supporting SAML and OIDC
- Hundreds of available application templates, with new applications being added continuously
- Multi language support on the IDP login page
- Easy customized branding for the IDP login page, including preview window
- Enhanced configuration options for SAML including SAML encryption settings

## Key Dates

---

Milestone	Date	Implications
SAS Cloud <b>SAML Service</b> Providers not available for NEW integrations	July 31, 2019	From 1 <sup>st</sup> August, 2019, all new application federations should be carried out using the new templates available through the “Applications” tab in the admin console.
SAS Cloud <b>SAML Service</b> Providers End of Life and end of Support	July 31, 2020	SAML federations via the SAS Cloud SAML service will no longer be supported after 31st July 2020.

The above schedule means that customers will have until 31 July 2020 to re-configure their existing **SAML Service Providers** integrations using the new template-based federation capability, which is already available in SafeNet Trusted Access.
